The contract period for the subject matter of bid is as mentioned in the bid Data Sheet (BDS) from the date of execution of agreement. The Procuring Entity has sole right to cancel any bid or all bids or the contract at any time without assigning any reason or any other new requirement or work/job emerged which has not been covered in the existing work mentioned in the bid.

First of all, it is very important for the bidders to know all the systems that are working in place to achieve the entire goal holistically. The vendor must understand that on what kind of system/portals he has to work efficiently and effectively to deliver output after completion of job in time otherwise penalty shall be invoked. The vendor must understand to work on modules developed by REIL embedded into the existing Online ERMS system on which vendor will be working and on portals introduced by the Election commission of India (ECI) such as ERO-Net, NVSP etc. of which insight has been given in the section of SoW. Vendors are required to work on the systems as mentioned below. It is the bidders’ responsibility to understand the following system carefully.

A. **ECI ERO-Net:**

   The ECI ERO-Net is a system to integrate processes of Election Commission of India (ECI). The system enables National Rollout of the e-Services (NRES) to stakeholders. Electoral process has two distinct components, first is the maintenance of healthy Electoral Rolls (ERs) and second is the efficient conduct of elections. Each of these two components is proposed to be integrated at national level and managed through ECI-Net using Information Technology (IT). ERO Net is for ERs management and RO-Net is for assisting in conduct of elections. ECI-Net also envisages e-office to automate process flow in ECI along with digitization of all information & records. The system will enable extending various services to external stakeholders. The system will also help in improving efficiency and decision making of internal stakeholders.
ERO-Net brings in seamless processing of forms, easy handling of the databases, regular and simpler way of monitoring the ERs activities and maintaining the ERs health.

The system has three major components,

- **ERO-Net** links all EROs of Nation.
- **UNPER** Unified National Photo Electoral Rolls Data.
- **NVSP** National Voters Service Portal - Citizen Electoral services.

To provide services on NVSP at national level, data exchange services are deployed at each state. To integrate ERs at national level as Unified National Photo Electoral Rolls Data. The ERs data is managed and maintained on state server by using ERMS of respective states. The ERO-Net system provides a unified ERMS service at national level on secure cloud using UNPER. The data exchange services will still be there to maintain the ERs both at national and state servers. The state servers will have mirror image of latest synchronized data on which all operations related to ERs may be done at state level. The state servers will also act as disaster recovery remote servers for UNPER. The overall scope of ERO-Net is to develop a web-based system for Electoral officials. The ERO-NET provides following functionalities in ERs management,

1. **Processing of electoral forms**
   a. View dashboard for overall processing.
   b. Processes and specifications for digitization and scanning.
   c. Assigning part number and BLO.
   d. Generation of checklist for field verification by BLO.
   e. Entering field verification report.
   f. Schedule hearing with electors/objectors or field re-verification.
   g. Getting feedback from ERO of previous AC.
   h. Sharing outcome of possible repeat entries with ERO(s) concerned.
   i. Approve/ Reject forms.

2. **Maintain electoral rolls**
   a. Generation of EPIC and inclusion in electoral rolls.
   b. Modification in electoral rolls.
   c. Migration/Deletion in electoral rolls.
   d. Generation of various formats (formats 1 to 11A).

3. **Polling Stations Management System**
   a. GIS location of PS.
   b. Part & Section boundaries on GIS.
   c. AMF Mapping.
   d. Part & Section optimization based on ECI guidelines.

**Electoral Services through ER entries**

- Web Portal (NVSP),
- Mobile App (Android, iOS, Windows),
- SMS gateway,
- E-mail.

Electors and Citizens get following information on the ER entries
Different types of forms and their details are as given below:

1. **Form Processing Through ERO-Net**
   a. Applicant fills form online on NVSP/ Mobile App/ SMS/ or submits physical form.
   b. In ERO-Net digitization of offline forms data is done.
   c. Alert is sent to user indicating submission of forms.
   d. Offline validations and checks are undertaken. Also alert is generated to AERO/ ERO and users indicating the submission/ Scanning of forms including supporting documents. The digitization of images done.
   e. The BLO of previous AC does field verification at old address in 7 days and gives feedback as Shifted/ Dead/ No Such person/ still living in the old address.
   f. ERO of old AC sends BLO field verification report to new ERO in 14 days. If found shifted from old place, the ER entry is ‘Marked for Migration’ to new ERO.
   g. Election Officer ERO/ AERO checks whether the form is ok to process further.
   h. If part IV is filled in Form 6 application - corresponding ERO/ Supervisor/BLO is informed by alert.
   i. The Checklist for field verification by BLO is generated.
   j. Alert is sent to applicant and concerned Supervisor/ BLO.
   k. BLO collects copy of form, supporting documents, and checklist. He does field verification using hard copy of checklist and sends outcome by SMS/ mobile app and sends filled in checklist electronically.
   l. The report of BLO is entered by data entry operator.
   m. Supervisor checks the form and field verification report, add his/ her remarks and submits to AERO.
   n. ERO/ AERO recommends based on inputs, such as documents submitted, field verification report(s), Objections received and remarks of other ERO.
   o. ERO rejects/ accepts/ schedules hearing. ERO may order re-verification process as well.
   p. Alert is sent to applicant about decision/ schedule of hearing.
   q. If ERO accepts the form either new EPIC is generated or old EPIC is retained in case of migration and the record is included in the E-Roll. In case of approved modifications the record in E-Roll is updated.
   r. If EPIC is to be printed then Generation of EPIC image (pdf) and link to printer is activated. Alert goes to elector and printer of EPIC.
   s. On completion of EPIC printing, alert goes to Elector to collect his EPIC from a designated place/ await delivery by BLO.
   t. If Appeal is filed before DEO/ CEO entire data moves to next level & process is repeated.

2. **Online Form Processing – In Nutshell**
   The applicant submits the form online at www.nvsp.in and on completion of the same gets the SMS/ email alert. Thereafter AERO checks the application for further processing. If ok, AERO assigns part and section number to the form. The BLO is either automatically or manually assigned. BLO can also be reallocated if desired. ERO/ AERO also generates a checklist, which includes demographically matched entries, for BLO to process further. The ERO/ AERO sets target date for BLO to process allocated forms. BLO also takes a physical print of the application as part of package required for field verification. BLO does field verification and executes the checklist. In case age is greater than 25 years, an undertaking is taken from the applicant. BLO makes comments on demographically similar entries and takes signature on physical form from applicant. BLO submits the information to the data entry operator who in turn enters the BLO report, corrections and supporting documents. Supervisor thereafter verifies the checklist and submits it to the ERO/ AERO, who reviews the checklist and gives observation to the ERO. The ERO if approves
application, an EPIC is generated and updations are done in central e-roll. If however ERO rejects the application, information is sent to the applicant about Schedule hearing or for re-initiating the process.

3. **Offline Form Processing – In Nutshell**
Physical forms from different locations arrive at the ERO office. Data Entry Operator at ERO office fills the count of received forms according to form count and AERO allocates jobs for the data entry operators. AERO thereafter generates QR code data file and assigns SLA for printing and affixing QR codes. These QR codes affixed forms are given to the SLA for scanning. SLA handovers digitized copy of the forms to AERO. The Data Entry Operator uploads digitized forms to ERO-Net one by one manually. Thereafter digitized offline forms are processed as per online processing.

**Note:** Here it is pertinent to mention that all the bidders will work according to ED/DEO/ECI guidelines issued in time to time. As of now, as per the ECI information, QR code has been removed from the system.
B. National Voter Service Portal (NVSP):
The Election Commission of India (ECI) in its endeavour to put in efforts in providing all possible support services to electors with the help of IT tools has created the National Voter Service Portal (NVSP – www.nvsp.in). The portal was launched on 25th January 2015 on the occasion of National Voters' Day with an aim to provide single window services to electors. Election Commission of India (ECI) has launched the National Voter Service Portal (NVSP) to create a single platform for voters to access all services provided by it. Voters will be able to apply online for new voter card registrations, and also apply for corrections in existing voter cards, through this website. NVSP has been made available from ECI website www.eci.nic.in. Users can visit the website and click on to NVSP link to avail the services. The site has been developed by the Centre for Development of Advance Computing (C-DAC), Pune. Various services being offered through NVSP are:

1. Search the name in Electoral List.
2. Apply on line in English/ Hindi Language for new registration in Form 6, 6A, 7, 8 & 8A.
3. Apply online for corrections, if any.
4. User can view details of his Polling booth, Assembly Constituency and Parliamentary constituency.
5. User can get the contact details of Booth Level officer, Electoral Registration Officer and other Election officer.

7. Users can view audio visual short films to get educated about election processes.
8. Audio Visual scripts are also available for getting to know about the polling processes.
9. Users can watch a short educational film on Electronic Voting Machine (EVM)
10. Year 2015 has been marked for “easy registration and easy correction” During this year, ECI will endeavour to put in efforts in providing all possible support services to electors with the help of IT tools. NVSP is one of them. And now ECI theme is “No voter is left behind”.
11. The NVSP has been revamped looking to the new portals which have introduced in to interlink to provide one stop solution to Indian citizen.

C. About Online ERMS (Electoral Roll Management System):-
All data entry of Forms and processing may also be done in ERO-Net system. The ERMS shall be used for State Specific need to be met out after downloading E-Roll data from the Unified National Photo Electoral Roll (UNIPER) i.e. ERO-Net. The use of ERMS would the limited and complement to ECI provided ERO-Net system. Here it very clear that at some moments ERO-Net will be used and sometime ERMS, therefore, the successful vendor has to work on both the systems after fetching data from the relevant Database System. Looking to this fact, all the stakeholders must know about the ERMS. The Electoral Roll Management System (ERMS) enables to maintain the complete electoral roll of state. The intensive & summary revisions i.e. updation, additions and deletions required in the electoral roll can be easily managed and also the time and expense on the information storing, sharing and publishing will be reduced. The application software provided by the ECI, will reduce the manual work, streamline the operation and hence increase efficiency, transparency and the productivity. It will also facilitate in publishing of accurate and timely electoral roll. Online ERMS allows electoral roll to revise every year to add the names of those who are to turn 18 on the 1st January of that year or have moved into a constituency and to remove the names of those who have died or moved out of a constituency. The ERMS will cover the entire process of Electoral Roll preparation for the state from Electoral Roll Revision data management to final Electoral Roll publishing. One of its salient features is have centralized database system, therefore, at the end the Election Department collects data (PDF/MS SQL Data) in CD/DVD at Headquarter from all the Districts which are a time consuming process to meet the timelines. This complex task will not exist after implementation of Online ERMS as the Database shall be residing on the centralised server kept in the Rajasthan State Data Centre under the supervision of NIC. Also it will automatically force to have data integrity, consistency & validation checks and maintain uniformity across the state. This will minimize errors in E-Rolls and its components.

The system will be a mix of client - server & web-based technologies. System shall work efficiently on even slow client end machines (P-III and above) as compared to faster machines. To stop unauthorized users to exploit the system, ERMS is password protected. System will have auto built-in checks to the extent possible in data entry to minimize errors in E-Roll. System shall update the electors' data in all related tables once it is entered in a master table (minimizing the data redundancy).

Every possible effort shall be made to make an error free Electoral Roll which is the most important pre-requisite. Detailed “Scope of Work” is given to explain the data preparation (data entry of all kinds of forms specified by ECI), and supply of Electoral Rolls and other electoral related components. The Online ERMS provided by ECI with some customization and addition of modules locally, has the following salient features but not limited to the same:

1. Integration of Electoral Roll (Integration of all E-Roll data of previous Mother E-Roll data with all Supplements as on date shall be required to prepare Mother Roll data) (Sample PER Format Annexure-T9). This shall be applicable before all publication of Draft Publication of E-Roll. This process shall be repeated every year under the direction of DEO/ECI.
2. Rationalization of polling stations shall be done every year as per the ECI guidelines using its module provided by REIL integrated into Online ERMS. This shall be applicable before all Draft Publications of E-Roll. This process shall be repeated every year under the direction of DEO/ECI.

3. Preparation of PDF, Printing of E-Roll Electors and Service Electors on appropriate media

4. Data entry of forms, as the case may be.

5. Merging of photographs from picture format to binary format, as the case may be.

6. Digital printing of error free / 100% corrected PER at the time of Draft Publication, Final Publication and as and when required. In case of error is found in E-Roll/PER, all the relevant pages shall be printed without any extra cost.

7. Searching of electoral data

8. E-Roll Data fetching from ECI ERO-Net server

9. Printing of Part’s header page, electoral roll and many other statistical reports

10. Printing of voter slip at the time of election etc.

The system is using following system software / tools:

1. Microsoft Server Platform Ecosystem

3. RDMS - Microsoft SQL Server 2012 Standard Edition

5. Web Server System Software - Microsoft IIS with Front End Tool as ASP .Net & C#

The Online ERMS software is operational at all the 33 districts with the result the ERMS client software connects to centralized database (Centralized Online ERMS). ECI provided Web-services have also been installed on the centralized server to synch data with NVSP Portal.
